Gabriel Sosa

Full-Stack Developer

I build complete products, from idea to production: data model, payments, AI integration, firmware, tests and deployment. Available for remote or on-site work.

EXPERIENCE

Full-Stack Developer — Teros

2026 – present

Lead developer: I designed and built the products end to end, from the database to deployment. My business partner and I define the product together.

- **Teros Reservas** (reservas.teros.com.ar): AI assistant (Claude API, 28 tools) that takes bookings and orders over WhatsApp without double-booking; receipt reading with vision; BullMQ + Redis; multi-tenant with RLS on Supabase. In production with real businesses.
- **Pases** (pases.teros.com.ar): Ed25519-signed QR tickets for nightclubs, an offline door app with reconciliation, bar ordering and Mercado Pago Marketplace with encrypted tokens. Next.js + Supabase, 90 test files and CI.
- **Techos**: roof-repair marketplace with documented reputation; quotes with PDF, address privacy, map-based radius search and job closing as a state machine. Nuxt 4 + Prisma/PostgreSQL, 100+ test files (including 33 Playwright end-to-end). MVP in staging.
- **Plugo** (plugo.com.ar): paid EV charging via QR; ESP32 firmware with device authentication and a command queue; split payments with Mercado Pago and automatic refunds. 100+ test files. Piloting.
- **Resortes NV** (resortesnv.com.ar): website and catalog for a manufacturer, built with Nuxt 4, shared zod validation and technical SEO.

Junior Data Analyst — THV Ingeniería

2025

- Designed a relational database for project tracking; cleaned and normalized historical data.
- Tableau dashboards for costs and delivery times.

Data Analyst (volunteer) — Municipality of Funes

2025

- Consolidated 12 monthly medical appointment reports (22 specialties) into a Power BI dashboard that exposed overloaded and underused departments.

DATA PROJECTS

- **Flight prices** — regression on 300,000+ flights, 6 models compared; Random Forest with R^2 0.97.
- **Fake news** — LSTM over Word2Vec embeddings, 91% accuracy.
- **Heart disease** and **customer churn** — boosting and bagging (AUC 0.89 and 0.86), with Streamlit apps.

SKILLS

Frontend

Vue 3 / Nuxt · React / Next.js · TypeScript · PWA · HTML / CSS

Backend

Node.js / Express · REST · BullMQ + Redis · WhatsApp / Meta APIs · PHP

Data

PostgreSQL · Supabase (RLS) · MySQL · SQL Server · Python · pandas · scikit-learn · Tableau · Power BI

AI, payments and firmware

Claude API (tool use, vision) · Mercado Pago · ESP32 (C++)

Tooling

Git / GitHub Actions · Vitest / Jest / Playwright · Vercel · Railway · Docker

EDUCATION

B.Sc. in Data Science (in progress)

Universidad Nacional de Rosario
2025 – present

Higher Technical Degree in Software Development

Terciario Urquiza
2020

Certifications: Desafío Latam — SQL, Python for data analysis, Statistics with Python, Visualization, Machine Learning (354 h). Data Analyst (Google / Coursera, 2023). Mobile Development (Comunidad IT, 2021).
